New Colostrum Replacer!

Truvital Animal Health's new product, **Immunolife 200**, is now in stock! Passive transfer of antibodies through the intestine into the bloodstream is critical for a calf's health as they are born with no innate immunity. To achieve successful levels of passive transfer, a calf requires 200g IgG at their first feeding of colostrum. Traditionally, colostrum replacer has only provided 100g IgG per package. Now, each bag of Immunolife 200 contains all 200g of IgG that calves require for adequate passive transfer. No more having to mix two bags for the first feeding!

Upcoming Stat Holidays

The clinic will be closed Victoria Day Weekend, May 18-20, re-opening Tues May 21st. As always, veterinarians will be available 24-7 for emergency service. The Saturday fee schedule will remain unchanged from non-stat weekends.
